

SAW Seminar and Demonstration

Mr. Joel Girard of Air Liquide presented the theory and background on the submerged arc process, as well as many of the applications and benefits.

The key benefits are increased productivity, quality, reduced costs, and reduced smoke emissions.

The group proceeded to shop following the presentation to watch one of the small machines in action.

Joel Girard (far left) and Gerard Pickett (in middle) demonstrate the SAW in action.

There is virtually no smoke during this process.
