

Trackless Magnetic Moggy ...Goes Vertical

Gullco International has introduced the new Trackless Magnetic Moggy Fillet Welding Travel Carriage.

With the ability to climb vertically and horizontally, the Magnetic Moggy offers low cost, highly efficient automation of fillet, lap and butt welding applications.

The Magnetic Moggy is ideal for “Tee” fillet welding where there is not enough room for the carriage to run along the horizontal plane.

Available with either “continuous travel” or “stitch weld” control, the Magnetic Moggy can run along a vertical plane as the magnetic base clings to vertical member for out-of-position operation.

Adjustable guide roll assemblies ensure accurate gun positioning while the Moggy carriage moves at precisely controlled speeds in forward/reverse direction.
